

## Individual reflections sprint 3

1. What do I want to learn or understand better? Consider e.g. teamwork, Scrum, agile processes, technologies etc?

Together with Gustav I implemented the weather forecast for the coming week. As it included both backend and frontend development I continued to learn the UI framework and also got to implement API requests as I wished to learn more about. I feel that I have become quite familiar with development environment for the project, so in the upcoming sprints my learning plan will be more focused on the teamwork and agile process, along with continuous contributions to the software.

2. What is my contribution towards the team's deliveries? How can I help my team do better next sprint?

As mentioned, me and Gustav developed an entirely new page that is reached by clicking the weather widget. The implementation sends requests to the weather API and presents it nicely on the forecast dashboard. The latter involved UI work on the forecast dashboard and the widgets and its contents.

I also acted as product owner this week. As the team has a democratic foundation, I didn't make any decisions on my own, but I gave my opinion on what needed to be prioritized in the sprint planning.

To improve the team's deliveries for upcoming sprints, I want to continue having a positive mindset and have fun with the team when with developing the application. Communication is key.

3. Changes/improvements from last week's reflection?

I learned more about the backend implementation and continued to deliver to the project's goals. I feel that I, together with the team, have continued to improve our deliveries and the team spirit is very good. We keep the team up to date continuously during the sprint regarding development and problems that occur, so the team is doing really well.
