

## individual reflection sprint 4 - Carl Odqvist

1. What do I want to learn or understand better? Consider e.g. teamwork, Scrum, agile processes, technologies etc?

I have worked on other tasks this week than I expected when I wrote my last individual reflection so everything I wanted to learn this week will remain for the next sprint. I would like to work more with animations and other more complex frontend functionality in Flutter. I would also like to be the product owner some week moving forward in order to try out the different roles. I would also like to continue to build new functionality upon the work of this week.

2. What is my contribution towards the team's deliveries? How can I help my team do better next sprint?

I have been working on the customizable preference feature. To accomplish this part we had to create new blocs (flutter elements) to enable the communication and new information classes to make this possible. I also took part in the discussion on how to edit our color choices in order to get better contrasts (in the detailed weather view) but still provide a vibrant user interface. After long discussions and new sketches we ended up with only small alterations.

3. Changes/improvements from last week's reflection?

We have worked very collaboratively, solving difficult parts together. This has been really rewarding since discussion with more people gets more diverse on the more difficult problems on group member's knowledge soon spreads to other members of the group. I am also happy to be able to refine features created in one sprint on the next sprint in order to make advanced functionalities which I wished to see more of in my last team reflection.
