

## individual reflection sprint 5 - Carl Odqvist

1. What do I want to learn or understand better? Consider e.g. teamwork, Scrum, agile processes, technologies etc?

The next week will be a short wrap up sprint and I will be focusing on code clean up and maybe some bug fixing. We will have to communicate with the product owner that we are done and then deliver the project.

2. What is my contribution towards the team's deliveries? How can I help my team do better next sprint?

In the beginning of the week I was working with the recommended days and the button to load more suggested days was implemented. I spent many hours debugging a problem we had with one of our APIs which caused a cascade of symptoms that was not obviously connected to that specific API. My main contribution this week was the caffeine gauge which is by far the most advanced frontend task I have done in dart/flutter.

3. Changes/improvements from last week's reflection?

I have learned more advanced front end functionality in dart, including putting multiple elements on top of each other and animation. After this task I feel more confident in how to structure widgets in larger and more complex user interfaces. We had a talk with Jonas about SCRUM best practices so I learned new things about how to manage the removal of features in the middle of a project.
