

Individual Reflection 3 - Harry Denell

What do I want to learn or understand better? Consider e.g. teamwork, Scrum, agile processes, technologies etc?

For the next week(s) I would like to spend some time thinking about and working with KPI:s. In our case it might just be Story Points for now, but it would be interesting to graph this data, to see some patterns, and the trends for how the team is performing etc. For the next week I would also like to continue to work and build on the location service we have now created. I think we have built this in a very modular way (OP-adherent), which should make further implementations on top of this rather smooth to do.

What is my contribution towards the team's deliveries? How can I help my team do better next sprint?

This week I have been working on the air quality card, finding an api for fetching the data based on the user's current location. We did some work on the Location class in the backend, making it into a singleton, with methods letting the Caller change whether the location should be fetched based on the user's current location, or letting it set the location based on input coordinates. After this I worked on letting the actual user change this from the UI, working with both the front end part, as well as Bloc (the middle interface between front end and back end). After this I worked on a User page, where the users data can be shown, as well as a method for signing out the user. This also involved creating the collection in the database and methods in a new UserRepository. As Scrum master of this week I tried to be the one making sure we had booked rooms each spring session, to give the team optimal conditions to perform and work together. For next week it would be fun to work with one of the teammates I have yet to work with, which I hope will be valuable and educational for both me and the other person! :)

Changes/improvements from last weeks reflection

For this week I was assigned the role as Scrum master. I therefore tried to be the one leading the scrum meetings, making sure to find time for a few more meetings, checking up with the team and how everyone was doing. This therefore forced me into trying to be a better teammate and communicator, which I think helped me achieve my goals from last week(s) of communicating and checking up on my teammates more often. I also got to work with several APIs this week, which was another goal of mine from last week. This was very educational and interesting
