

# Individual Reflection 5 - Harry Denell

What do I want to learn or understand better? Consider e.g. teamwork, Scrum, agile processes, technologies etc?

For the following week I want to learn some good techniques for screen recording and maybe even a little video editing for the upcoming video demonstration.

What is my contribution towards the team's deliveries?

During this sprint, I implemented a music player feature using the "audioplayers" plugin in Flutter. This plugin made it convenient to create a fully functional music player with all the necessary controls.

To enhance the user experience, I sourced royalty-free music that can be used legally in our app. These tracks complement the app's atmosphere and ensure compliance with copyright regulations.

Furthermore, I integrated AI-generated images from Midjourney to improve the front end of our application. These visually appealing images add a unique touch and enhance the overall aesthetic appeal.

In addition to the music player, I worked on upgrading the design of our run keeper feature. By utilizing AI-generated images, I enhanced the visual elements and made the design more captivating.

How can I help my team do better next sprint?

Looking ahead the following week, our focus will primarily be on making small improvements, particularly in terms of design. This will involve refining the visual elements of our app and ensuring a polished and aesthetically pleasing user interface, so that we can make an as good video presentation as possible

Changes/improvements from last weeks reflection

The team had a very productive week, and I feel like I got to work on some very interesting stories, with features that would provide lots of value to a potential customer
