

Team reflection sprint 1 - Carl Odqvist

1. What do I want to learn or understand better? Consider e.g. teamwork, Scrum, agile processes, technologies etc?

I would like to better understand the interaction between frontend and backend and the use of firebase. I would like to improve my communication skills to make my words appear more clearly.

2. What is my contribution towards the team's deliveries? How can I help my team do better next sprint?

I have worked with the API calls and data handling for the weather api. This part is almost complete, there may be additional features we want to add from this API but for now I work. We currently have weather predictions for one week including temperature, wind (speed and direction), precipitation, cloudiness, weather codes, snowfall and snow depth. I have also worked with the functions for calculating the caffeine levels.
