

Individual reflections sprint 2

1. What do I want to learn or understand better? Consider e.g. teamwork, Scrum, agile processes, technologies etc?

This week was primarily focused on finishing some parts of the front end GUI that was implemented in the first week. I got some insights and wrote some code in the back end as well, but I would like to learn more about the back end and perhaps implement the air quality API that still has not been done.

I also would like to contribute to improving the team's communication and keep the agile process up to date continuously during the sprint.

2. What is my contribution towards the team's deliveries? How can I help my team do better next sprint?

I finished the weather widgets so that it is presenting appropriate pictures and back ground colors based on the current weather. I also made some additions to the data presented. I think I could contribute to the team even more if I got to learn more about the back end implementation.

3. Changes/improvements from last week's reflection?

I learned a lot more about the environment and could contribute more concise implementations.
