

Individual Reflection 2 - Harry Denell

What do I want to learn or understand better? Consider e.g. teamwork, Scrum, agile processes, technologies etc?

For next week I would like to work on my teamwork-skills. For this week I have spent quite a lot of time writing code by myself, and once I started this process, it was rather hard to put it on paus and help the others before finishing this, when they needed help. I have mostly spent time on the caffeine part of the application, which has been working with Bloc (flutter state management) and Google Firebase, NoSQL-database. I would like to get on more of the other API parts of the application, like weather or geolocation to get a better understanding of how it works!

What is my contribution towards the team's deliveries? How can I help my team do better next sprint?

As mentioned, I have mostly been working on the caffeine functionalities of the application, both the back end parts and the UI design and implementation. I have added functions in the Caffeine Repo like fetching all caffeine, adding caffeine to the database, all while making sure to only fetch documents that belong to the right user. I have also implemented a login/signup part of the app when starting it for the first time, that forces the user to have an account with a real mail before being allowed to use our application (for safety reasons).

For next week I think I can provide even more value to the team by checking up more often on how everyone is doing, and if there is something I can do to help them! I would also like to spend some time on refactoring, code clean up and documentation to make sure the code i produced so far is more reliable and easier to understand for my team mates!

Changes/improvements from last weeks reflection

Last week I stated that I wanted to work on my team-working skills, and I have spent some time on this, trying to help whoever needs help.

We made sure to pick the roles of the team, scrum master and product owner, and this made a difference for the better when having scrum meetings etc.
