Individual Reflection 4 - Harry Denell

What do I want to learn or understand better? Consider e.g. teamwork, Scrum, agile processes, technologies etc?

I would like to learn some testing frameworks with flutter and dart for the coming week.

What is my contribution towards the team's deliveries?

During this sprint, I focused on building a run tracker with the locations API using BLoC, streams, and StreamControllers. This was a great opportunity for me to learn more about these, and apply them in a real-world scenario that felt fun and interesting. I feel like I gained a better understanding of how to use these tools effectively and efficiently.

I also created a dashboard card that displays an inspirational quote from the Firebase database that was prompted using ChatGPT. I also brought up the idea of looking at KPIs to track our progress, which was interesting to see, and made us reflect on the coming two sprints.

How can I help my team do better next sprint?

To help the team do better next sprint, I think it's important to continue to communicate effectively and work collaboratively. I believe that we can benefit from setting clear goals and priorities for the following sprints and regularly reviewing our code and progress.

It feels like we are getting close to wrapping up this project with a successful outcome, so I would say we should just try to keep things up for the coming two sprint weeks.

Changes/improvements from last weeks reflection

Last week, I mentioned that I wanted to look at KPIs to track our progress. During this sprint, we were able to discuss and analyse story points per week and accumulated story points versus left story points. Although we didn't have time to explore other metrics, I think this was a good start.

I got to work with a larger feature with Bloc, which I would say helped my understanding of this alot.
