Individual reflections sprint 4

1. What do I want to learn or understand better? Consider e.g. teamwork, Scrum, agile processes, technologies etc?

As we work with the project, we come closer to the wrap up part of the project. So far, we have continuously worked with new features and developments of the product. I want to learn more about the how to think of the final phases of agile development, when we take the last development decisions and then polish the product.

2. What is my contribution towards the team's deliveries? How can I help my team do better next sprint?

Me, Carl and Andreas focused on developing the individual settings regarding the suggested running days. I primarily developed the UI regarding the pop-up window that allows the user to set their weather preferences. We also fixed some contrasting errors regarding the weather forecast.

I also acted as scrum master this week. I tried to continuously check in with the team so that everyone was involved with some work and update the scrum board so that the sprint plan was followed. During the sprint, we made some new decisions about what to exchange the health data with. This was added to the scrum board (and also finished) during the sprint.

For the upcoming weeks, I think it is important that I keep help the team when needed and being involved with the final decisions regarding the product. I think that I can have some valuable insights regarding those decisions.

3. Changes/improvements from last week's reflection?

I have learned more about how the stateful and stateless widgets in Dart/Flutter works. As I have not been involved with frontend widgets that made database updates based on user input, this was completely new for me this week. I appreciated learning this during this sprint.
