individual reflection sprint 2 - Carl Odqvist

1. What do I want to learn or understand better? Consider e.g. teamwork, Scrum, agile processes, technologies etc?

After having been scrum master for this sprint I would also like to be product owner in order to experience different roles and perspectives in an agile team. I would also like to work even more with the frontend to be more comfortable with the structure of flutter. Moving on I would also like to add more complex functionality which combines different parts we have already built.

2. What is my contribution towards the team's deliveries? How can I help my team do better next sprint?

I began this week by working on the weather functionality, especially the new api for retrieving information about when the sun goes up and down given any coordinates. It will be used when the app should show a sun or not in the dashboard. This information cannot be found in the previous weather API that only provided cloud cover, not if it was sunny or if it was a clear night sky. Later in the week I worked with the caffeine gauge for adding new data of consumed drinks.

3. Changes/improvements from last week's reflection?

We have all planned when to meet earlier and expressed it more clearly in our common communication channel. I have worked in the front end this week and now understand more about the interaction between frontend and backend in flutter.
